FINDING OF NO SIGNIFICANT IMPACT FOR THE UPPER/LOWER RIVER ROAD WATER AND SEWER DISTRICT'S IMPROVEMENTS TO SERVICE DISTRICT NO. 2

TO: ALL INTERESTED PERSONS

Date: March 15, 2007

Action: Constructing water and sewer improvements for Service District No. 2

Location of Project: Great Falls, Montana

DWSRF Funding: \$619,000. Total Project Cost: \$2,001,000.

An environmental review has been conducted by the Montana Department of Environmental Quality for the proposed construction of improvements to the Upper/Lower River Road Water and Sewer District's Service District No. 2. The proposed project involves the construction of 3200 lineal feet of water main with hydrants, valves and appurtenances, along with 5200 lineal feet of gravity sewer main and manholes. The purpose of the project is to protect public health by extending municipal water and sewer mains to existing developed properties. The groundwater wells and sewage treatment systems currently serving these properties would be abandoned.

The affected environment will primarily be the area east of Lower River Road and between 24th Avenue South and the Pearson Addition . The human environment affected will include the city of Great Falls and surrounding area. Based on the information provided in the references below, the project is not expected to have any significant adverse impacts upon terrestrial and aquatic life or habitat, including endangered species, water quality or quantity, air quality, geological features, cultural or historical features, or social quality.

This project will be funded with state and federal grants and a low-interest loan from the Montana Drinking Water State Revolving Fund (DWSRF) Program, administered by the Montana Department of Environmental Quality and the Montana Department of Natural Resources and Conservation.

The Department of Environmental Quality utilized the following references in completing its environmental review of this project:

- <u>Upper and Lower River Road Water and Wastewater Facilities Plan</u>, October 2000, prepared by Neil Consultants, Inc., Great Falls, Montana.
- <u>Upper and Lower River Road Water and Wastewater Facilities Preliminary Engineering Report</u>, April 2002, prepared by Neil Consultants, Inc., Great Falls, Montana.
- Water System Design Report, Phase II Upper and Lower River Road Improvements, February 2007, prepared by Neil Consultants, Inc., Great Falls, Montana.

 Wastewater Collection System Design Report, Phase II Upper and Lower River Road Improvements, February 2007, prepared by Neil Consultants, Inc., Great Falls, Montana.

In addition to these references, letters were sent to the Montana Department of Fish, Wildlife and Parks, the Montana Department of Natural Resources and Conservation, the Montana Department of Environmental Quality, the United States Army Corps of Engineers, the U.S. Fish and Wildlife Service, the U.S. Department of Agriculture's Natural Resource Conservation Service and the Montana State Historic Preservation Office. Responses were received from the United States Army Corps of Engineers, the Montana Department of Natural Resources and Conservation, the Montana Department of Environmental Quality and the Montana State Historic Preservation Office. These references are available for review upon request by contacting:

Comments on this finding or on the environmental assessment may be submitted to the Department of Environmental Quality at the above address. Comments must be postmarked no later than April 30, 2007. After evaluating substantive comments received, the department will revise the environmental assessment or determine if an environmental impact statement is necessary. Otherwise, this finding of no significant impact will stand if no substantive comments are received during the comment period or if substantive comments are received and evaluated and the environmental impacts are still determined to be non-significant.

Todd Teegarden, Chief
Technical & Financial Assistance Bureau

ENVIRONMENTAL ASSESSMENT CHECKLIST

The following questions have been developed to assist DEQ in conducting its environmental review of DWSRF projects. This checklist should be completed by the review engineer utilizing personal knowledge and interdisciplinary expertise along with the PER and Uniform Application EA checklist.

Additional space for comments is provided under the heading Discussion and References. In narrative form, the DEQ reviewer should describe any problems judged to be environmentally significant. The DEQ reviewer should reference the source of judgment. As an example, this could be an expert biological opinion or the comments of a local or county planner.

This checklist should also be used as a reference when preparing an EA report. Significant issues should be evaluated further and, where appropriate, discussed in an EA report. Alternatives that avoid adverse impacts should be considered. Mitigation measures to overcome impacts should be adopted. Unavoidable adverse impacts should be identified.

[Instructions: Write in the appropriate response on the line adjacent to the checklist item, i.e., Y (yes), N (no), NA (not applicable), PA (possibly adverse), PB (possibly beneficial), U (unknown), NK (none known) or any other appropriate comment). Use comment area at end of checklist to explain when necessary.]

Physical Aspects - Topography, Geology and Soils

1.

a.	Are there physical conditions (e.g., steep slopes, shrink-swell	
	soils, etc.) that might be adversely affected by or might affect	
	construction of the proposed project?	N
b.	Are there similar limiting physical conditions in the planning	
	area that might make development unsuitable?	N
c.	Are there any unusual or unique geological features that might	
	be affected?	N
d.	Are there any hazardous areas (slides, faults) that might affect	
	construction or development?	N
Discussion	on and References:	
Based on	experience from construction of the first phase, no soils, topographic	or geological
	is are likely to adversely affect the construction of this phase of the pr	
	*	

2.	Clin	<u>nate</u>	
	a. b.	Are there any unusual or special meteorological constraints in the planning area that might result in an air quality problem? Are there any unusual or special meteorological constraints in the planning area that affect the feasibility of the proposed project?	N
Disc	cussion	and References:	
		t specifications will have provisions for the control of dust during con	struction
activ	vity.		
3.	Popi	<u>ulation</u>	
	a.	Are the proposed growth rates unreasonable?	N
	b.	Will new housing serviced by this facility affect existing facilities, transportation patterns, environmentally sensitive	
		areas, or be in special hazard or danger zones?	N
	c.	Will new housing create strains on other utilities and service (police, power, water supply, hospital care, schools, etc.)?	N
Disc	cussion	and References:	
4.	<u>Eco</u>	nomics and Social Profile	
	a.	Does documentation exist which suggests that the local	N
	b.	populace cannot afford the proposed project? Will the facilities adversely affect land values?	N PB
	c.	Are any poor or disadvantaged groups especially affected by this project?	N
		and References: vater and sewer service will likely enhance the value of property within	n the district.

a. Will projected growth defeat the purpose of any known local land use controls? b. Is the location of the facilities incompatible with any known local land use plans? c. Will inhabited areas be adversely impacted by the project site? d. Will new development have adverse effects on older existing land uses (agriculture, forest land, etc.)? e. Will this project contribute to changes in land use in association with recreation (skiing, parks, etc.), mining or other large industrial or energy developments? Discussion and References: 6. Floodplain Development a. Does the project area contain 100-year floodplains? If yes to a., then: b. Will the project be constructed in a 100-year floodplain? c. Will the project serve direct or indirect development in a 100-year floodplain anywhere in the planning area? Discussion and References: The 100-year floodplain extends west from the railroad tracks at the western boundary oproposed construction. No portion of the proposed project is within the 100-year floodpextension of water and sewer service to this area is not expected to facilitate development by wells and subsurface sewage treatment systems, the net effect of the project on grouquality and public health is expected to be beneficial.
